ElevenLabs, the voice AI company valued at $11 billion with $500 million in annual recurring revenue, launched ElevenMusic on April 29, 2026. The platform generates complete songs from text prompts across 70+ genres, from lo-fi hip-hop to cinematic orchestral. Songs output

at 44.1kHz (CD quality) in under 30 seconds. Users can generate vocals with custom lyrics or instrumental-only tracks, control tempo and musical key, and edit individual sections like verse, chorus, and bridge independently. It supports multilingual vocals in English, Spanish, German, Japanese, and more. It also includes true stem downloads: isolated vocals, drums, bass, and instrument layers for professional mixing. ElevenMusic launched with 4,000+ independent artists already on the platform, built in collaboration with labels, publishers, and artists including Kevin Jonas Sr. (Jonas Group Entertainment).

Commercial licensing separates ElevenMusic from research-stage tools like Suno and Udio. Generated music is cleared for film, television, podcasts, social media, ads, and games. ElevenLabs has already paid over $11 million to voice creators through its voice library and is extending a similar monetization model to music: artists publish, grow audiences, and earn from listener engagement. For a YouTuber or indie game developer, this replaces $50-300 per track stock music costs with unlimited generation on a subscription.

This arrives alongside Spotify's new "Verified by Spotify" badge (April 30, 2026), which explicitly excludes AI-persona artists from verification. The music industry is splitting: platforms like ElevenMusic embrace AI generation with commercial frameworks, while Spotify builds walls between human and AI-created content. Google DeepMind's Lyria 3 focuses on real-time steering and watermarking; ElevenMusic prioritizes the full commercial pipeline from creation to monetization.
