Kandinsky 6.0 Video: Picture and Sound in One Download

Kabui, Charles

2026-10-28

Read at ToKnow.ai

Kandinsky Lab released Kandinsky 6.0 Video on 6 October: a pair of downloadable models that make a five-second clip and its soundtrack in one pass. The small version has 3 billion parameters, the large one 29 billion. Both produce 44 kHz audio, about the rate of a music CD, with the lips timed to the speech. Picture and sound are trained together and exchange

signals, so the model learns the timing. A second model upscales the output to 1920 by 1080. The weights are free to download.

On VABench, which scores generated sound and picture, the large model beat LTX 2.5, another open model, on lip-sync and audio-video alignment. Training that rewards clear speech cut the share of mistranscribed words by 47%. It also runs on a 16 GB graphics card, slowly: a Full HD clip from the full large model takes 26 minutes on an RTX 5080 and 59 on an RTX 5060 Ti, against 14 on an RTX 5090, and that setting needs about 60 GB of system memory.

In blind side-by-side tests, raters preferred it to LTX 2.5 on visuals and speech. Against paid systems the results are mixed: a split with Kling 2.6 and Veo 3.1 Fast, and MiniMax H3 and Seedance 2.0 ahead on visual quality. Clips stop at five seconds, against the 30 seconds Wan 3.0 manages. It can also start from an audio file or from a first and last frame.
